»Where the ordinary stops, we get going!«

OUR HIGH-TECH SANDSTONE LED-PANEL

Surface

Eco-friendly production methods in open pit mining allows the layering of thin-walled sediment on a special base fabric.

The resulting Flex-sandstone contains sedimentary structures which were deposited over thousands of years by nature.

Raw material used:

Silica sand of glacial origin

Primary age: 40 million years

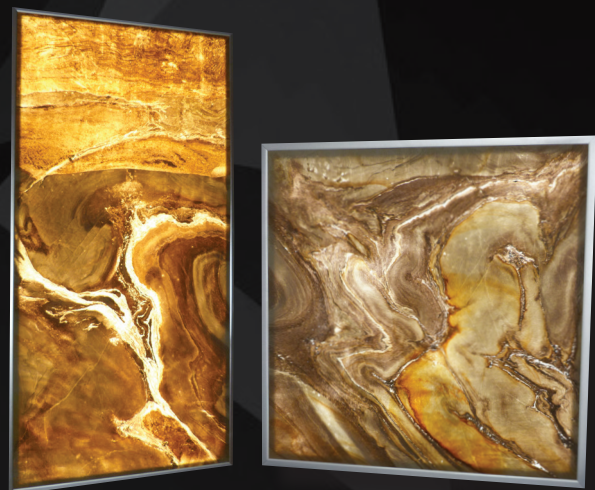

Country of origin: Germany

Weight: approx 2000-5000 g/m²

In this way, we bring to light textures that would otherwise not be visible.

With its universal formability, its natural stratification and its naturalness Flex-Sandstone sets new accents in decorative wall and surface design.

After many trials and tests, we have succeeded in evenly backlighting and illumination Flexible of Sandstones.

High-tech LED panels mounted behind the textures create a unique play of colours of different layers of sediment that had been deposited by nature in millenniums.

This exceptional colour match is exacerbated by the controllability of our panels.

Not only the brightness of the high-tech panels can be dimmed, but also their light colour (Kelvin value) can be adjusted infinitely.

So you can quickly and easily create any light mood from warm white to cool white.

The intelligent light management also enables the combination of panels to a group (4 groups are possible). They are jointly driven by a radio remote control, whose properties are also adjustable.

By default, our provided remote control unit is being operated with 2.4 GHz.

Alternatively, or additionally, control of the Panel can be exercised using our Wifi controller via your Smartphone and/or Tablet.

For this purpose, only the corresponding app needs to be installed on your mobile device.

For Android devices: Mi Light

For iOS devices: Mi Light

Our LED high-tech panels are cleanly mounted in an aluminium frame. Of course we can supply an anodized aluminium frame in gold. Along with it is the transformer and the controller.

You only need 2 screws and a power supply to start operation, i.e. an assembly time of just 15 minutes is sufficient.

For your information, we are able to apply our sandstone lighting skins to any objects one can think of. We are specialists in lighting objects.

Overview of our Lighting Products:

- Light bars, illuminated sandstone surface for catering or fixed mounting in square or round (bar is set up in less than an hour, ready for operation)
- Bar tables, illuminated sandstone surface for catering or fixed mounting
- Seating islands, cubic rayed sandstone surface (ideal for lounge, bar, discotheques)
- Lit Sandstone surface balls, hanging or standing
- available in many sizes (e.g. 50cm, 77cm, 100cm, 200cm)
